-------------------------	----------	-----------	-----	--

The biodiesel companies on this map are actively producing biodiesel.

Total annual production capacity, including the plants that chose not to list their production capacity is 1.39 billion gallons. It is important to note that production capacity differs from the actual number of gallons sold. A graph illustrating biodiesel production can be found at [http://www.nbb.org/pdf\\_files/fuelfactsheets/Production\\_Graph\\_Slide.pdf](http://www.nbb.org/pdf_files/fuelfactsheets/Production_Graph_Slide.pdf)

Contacts for these companies can be found on the National Biodiesel Board website at [http://www.biodiesel.org/buyingbiodiesel/producers\\_marketers/](http://www.biodiesel.org/buyingbiodiesel/producers_marketers/) or <http://www.biodiesel.org/members/>

Multi Feedstock is a term used to describe plants that can use a variety of feedstocks. In most cases, this means a plant is able to process vegetable oils, animal fats, recycled cooking oil or yellow grease.
